Ajaib Unified Rewards System (Genie) - PRD

By Kedarnath Kulkarni (x17kedarnath@iima.ac.in)
Aug 2025

Context: Indonesia's Payments & Fintech Landscape

Indonesia's fintech space is booming, driven by a young, tech-savvy population and strong government support. With ~280 million people and **~213 million internet users**, digital adoption is among the world's highest. Bank Indonesia's **QRIS** (Quick Response Indonesia Standard) has rapidly expanded – as of Oct 2024, **54 million users and 35 million merchants used QRIS**, and e-money transactions grew 27% year-over-year. Yet cash still dominates offline commerce (~51% of POS value), indicating vast scope for digital finance.

The fintech ecosystem has diversified beyond payments: from 2011 to 2022 the number of fintech firms ballooned (from 51to 334), with traditional payments now complemented by lending and wealthtech. Platform providers (e-commerce, ride-hailing, etc.) are embedding financial products (BNPL, insurance, mutual funds) to boost retention and share-of-wallet. This integrated approach has spurred digital banking, showing the value of cross-product ecosystems. In summary, Indonesia's financial services are rapidly digitizing, supported by regulation and investor interest. This creates a fertile environment for Ajaib's next-generation ecosystem strategy.

Opportunity: Rewards as a Growth Lever

Rewards programs are proven incentives for acquisition, conversion, and loyalty. By aligning rewards with desired actions, fintechs globally have accelerated growth. For instance, major players offer tangible benefits to attract and retain users:

Global Precedents:

- Robinhood: Gamified referral program offering free stocks for both referrer and referee, driving viral acquisition.
- SoFi: Points system connecting banking, lending, and investing with exclusive member benefits.
- Banks (JPMorgan Chase, BofA, Wells Fargo) offer cash bonuses or points on new account and card openings.
- Freetrade: Rewards and referral bonuses specifically targeting young investors.
- Trading 212: Fractional share rewards for account funding milestones.

Regional Success Stories (India)**:**

- Paytm: Cashback and points spanning payments, investments, and commerce driving 100M+ MAUs.
- PhonePe: UPI rewards program enabling ~50% market share.
- Groww: Mutual fund fee waivers and stock rewards building India's largest retail investment platform.

These examples demonstrate that **tech led incentives drive sign-ups and engagement and provide solutions to retention challenges**. By offering personalized rewards and instant gratification, they strengthen customer relationships and drive growth.

For Ajaib, a unified rewards system spanning stocks, crypto, mutual funds, bonds, payments, and savings can unlock similar dynamics. **Ajaib's mission** is to "empower individuals, especially first-time and young investors, to achieve financial freedom through simplicity and accessibility". **Rewards directly serve this mission**: e.g. offering new users a small free stock or cashback makes their first trade more appealing and incentivizes investing. **Cross-product rewards** (e.g. a bonus stock for making a payments transaction) encourage users to engage more widely with Ajaib's ecosystem, **increasing wallet share**.

Market-wise, Indonesia's addressable market is huge. With over 200 million connected consumers and only ~10–15% estimated penetration in retail investing, there is headroom to grow. Leveraging Ajaib's existing multi-product platform and data (trading accounts, wallets, user profiles), a sophisticated **rewards engine can benefit Ajaib** in the below ways -

1. **Acquisition Cost Efficiency**: Referral rewards typically cost 30-50% less than paid acquisition.
2. **Engagement Multiplier**: Loyalty programs increase transaction frequency by 40-80%.
3. **Cross-selling Acceleration**: Rewards drive 3-5x higher cross-product adoption.

The rewards engine can leverage Ajaib's existing strengths of

- **Comprehensive Product Suite**: Stocks, crypto, mutual funds, bonds, payments, and savings enable rich cross-rewards.
- **Mobile-First Platform**: Optimized for rewards delivery and engagement.
- **Regulatory Compliance**: Deep understanding of Indonesian financial regulations.
- **User Base Scale**: Established user base for effective cross-sell and upsell.

In short, rewards strengthen Ajaib's core proposition by making financial services fun and rewarding, while aligning with the mission of simplicity and accessibility. The result should be higher user acquisition, engagement, and retention – all at a controlled cost.

Ecosystem & User Segments Mapping

Ajaib's ecosystem stakeholders include end-users (retail customers), merchants (QRIS/payments), partner fintech companies (banks, merchant acquiring fintechs, payment gateways/ PSPs, card issuers), and regulators. Focusing on retail users, we segment by behavior and financial needs :

1. **Novice Investors:**
    a. **Profile**: Age 18 - 30. Young or first-time users with minimal investment history. Typically mobile-savvy but price-sensitive.
    b. **Goals**: learn investing, build confidence, start small.
    c. **Rewards fit**: Rewards that reduce friction (free trades, stock bonuses).
    d. **Priority**: High (Largest growth opportunity)
2. **Active Traders/Investors:**
    a. **Profile**: Age 25 - 45. Users who frequently trade stocks, crypto, mutual funds, bonds.
    b. **Goals**: maximize returns, reward for loyalty and volume.
    c. **Rewards fit:** They respond to scaled incentives (higher trading limits, premium loyalty tiers, airmiles per trade).

    d. **Priority:** High (Highest revenue per user)
3. **Saver/Payments-centric Users**:
    a. **Profile:** People primarily using payments, digital wallets, or savings products.
    b. **Goals:** Safe growth, convenient banking, reward accumulation
    c. **Rewards fit:** For them, loyalty rewards (bonus interest, cashback on bills/QRIS payments, merchant offers) are key.
    d. **Priority:** High (largest in number and frequent usage (daily/weekly))
4. **Crypto Enthusiasts:**
    a. **Profile:** Tech-savvy, risk-tolerant, community-oriented.
    b. **Goals**: Access new assets, maximize gains, early adoption benefits.
    c. **Rewards fit:** Token rewards, exclusive access, community status. May crossover with stocks/mutual funds if incentivized.
    d. **Priority:** Medium (Strategic growth area)
5. **Influencers/Advocates**:
    a. **Profile:** Users who frequently refer others or share content.
    b. **Goals:** social recognition, additional perks.
    c. **Rewards fit:** Rewarding referrals and social engagement that drives word-of-mouth growth.
    d. **Priority:** Low (small number, exposure to regulatory risk)

Use Cases

1. **Acquisition & Referral:** Reward new-user signups and referrals. Examples: Both referrer and referee get cashback or free asset when the referee opens an account, completes KYC, or makes first trade. This drives user growth via word-of-mouth.
2. **Product Onboarding/Conversion:** Incentivize users to try new products. Examples: give bonus points or a small free investment for making the first mutual fund purchase, buying crypto, or linking a bank account.
3. **Loyalty & Engagement:** Ongoing rewards for repeat usage. For trading products, this could be “streak bonuses” (e.g. small bonus for trading X days in a row) or tiered points. For payments/savings, rewards like higher interest rates or cashback on bill payments, and special deals.
4. **Ad-Hoc Campaigns:** Time-limited promotions tied to events (e.g. New Year, market campaigns). E.g. “Trade five different stocks this month to earn a reward”, or “Spend IDR100k via QRIS to get a chance at a crypto giveaway.”

Product Goals: Increase **user acquisition and activation, boost transaction frequency and cross-product usage, and improve user lifetime value (LTV)**, all while controlling reward cost and mitigating fraud. In other words, success means measurable growth in users and transactions that exceed the reward investment, aligned with Ajaib's mission of simplicity and financial empowerment.

Solution & Product Features

Types of Rewards

1. **Acquisition Rewards -**
    a. **Cash/Stock Back (Referral):** E.g. a flat cash or stock bonus credited to both referrer and new user after the new user completes signup and first trade.
    b. **Welcome Bonus**: Cashback, deposit matching up to a limit for new users.
    c. **Cross-Product Incentives:** Encourage cross-use of products, e.g. a "stock bonus" for using payments, or a free mutual fund for completing 5 bill payments.
2. **Conversion Rewards -**
    a. **First Trade Reward:** Commission free trade or bonus share.
    b. **Gamified Incentives:** Rewards for milestones (e.g. "10 trades this week – win prize").
    c. **Behavioural Nudges**: Time limited offers for specific actions.
3. **Loyalty Rewards -**
    a. **Loyalty Points:** Points earned per transaction (bills paid, deposits), redeemable for cash, assets, vouchers, or airmiles. For example, 1 point per IDR1000 traded.
    b. **Bonus Interest:** Higher savings interest or yield on cash wallets if certain criteria met (e.g. maintaining a minimum balance, or completing X payment transactions in a month)
    c. **Engagement based**: Points for content consumption, social sharing.
    d. **Tiered/Subscription Rewards:** Premium benefits for users who subscribe to a loyalty tier (akin to Paytm First), such as enhanced support or waived fees.

4. **Campaign Rewards -**
    a. **Merchant-Funded Deals:** Partnerships (e.g. merchants, cards) offering joint promotions. E.g. complete a QRIS payment of IDR50k and get a 5% cashback on shopping, funded by the merchant.
    b. **Seasonal Promotions**: Holiday themed rewards.

Each reward must be carefully parameterized (amount, conditions, expiration) and designed with clear user communication. A central "Rewards Library" in the system will catalog these reward types, rules, and value.

Campaign Manager, Targeting, Serving, Rewards Catalog Features

A central **Campaign Manager** will allow marketing/growth teams to create and manage reward campaigns. Key features include:

1. **Audience Targeting:** Ability to select who sees/ is offered each reward campaign. Targeting parameters include:
    a. ***Demographics****:* Age, gender, income bracket, etc. (e.g. target young users for crypto promotions).
    b. ***Location****:* By city or region (e.g. special Jakarta campaign).
    c. ***Device****:* OS, model, or device value (target high-end smartphone users for premium offers).
    d. ***Behavioral****:* Based on transaction history (e.g. users who have traded stocks but not mutual funds).
    e. ***Intent/Interest****:* Users who browsed a feature or clicked an in-app banner.
2. **AI/ ML-Powered Audiences***:* Segments created by AI/ ML (based on propensity to trade, predicted LTV etc).
3. **Audience Module:**
    a. Real-time audience size estimation and reach analysis.
    b. Saved audience segments for common use cases.
    c. Audience overlap analysis for campaign coordination.
4. **Campaign Serving & Rules:**
    a. ***Reward Capping****:* Limit how much reward a user or the overall campaign can give (e.g. max 3 referrals per user, daily cap, total budget cap) to control costs.
    b. ***Frequency Capping****:* Limit how often a user can trigger the reward (per day/week/month).

    c. ***Real-Time Decisioning**:* A campaign selection engine that in real-time decides which active campaign(s) apply to a user action, balancing relevance (fit user profile/goals) and revenue impact.
    d. ***AI/ML Optimization**:* Predictive models estimate conversion rate, incremental revenue, and payback period for each user-campaign match, to prioritize higher ROI offers.
5. **Dynamic Reward Adjustment***:* In advanced mode, the system might adjust reward value on-the-fly (within preset bounds) based on current campaign performance or user value.
6. **Measurement & Analytics:**
    a. Track **key metrics for each campaign**: activation rate, conversion (did user complete target action?), incremental lifetime value of users, actual payback period, churn impact.
    b. **A/B testing** framework for offers.
    c. **Dashboards** for quick visibility of campaign ROI, fraud flags, and user engagement.
7. **Campaign Setup & Ops:**
    a. ***User Interface**:* An intuitive UI for marketers/growth managers to configure campaigns: select audience, set rewards, schedules, caps.
    b. ***Templates & Cloning**:* Save campaign templates and bulk-edit fields for efficiency.
8. ***Rewards Catalog**:*
    a. A central "Rewards Library" in the system will catalog the reward types, rules, and value,
    b. Predefined rewards in a library to easily pick from.
9. **Eligibility Rules Configuration:** A rule-builder interface where conditions (e.g. "first trade >= IDR100k" or "5 QRIS transactions this month") and trigger events are defined for when a user becomes eligible and how/when the reward is granted.
10. **Integrations:** APIs to connect with each product line's backend. For example, when a user completes a stock trade or a QRIS payment, the event is sent to the rewards engine to evaluate applicable campaigns.
11. **Admin & Security:**
    a. Role-based access control (RBAC) – different permissions for campaign creator, approver, reviewer, etc.
    b. Audit trails for changes to campaigns and reward disbursals.

System Architecture & Integration

The “Genie” rewards system will be built as a modular, service-oriented platform that interacts with all product backends via APIs/events:

1. **Integration Layer**: Core components include an Event Bus (e.g. Kafka) where user and transaction events (trades, deposits, payments, logins etc) are published. The rewards service subscribes to relevant events to evaluate campaign conditions in real time.
2. **Campaign Service**: Hosts campaign definitions, targeting criteria, and reward logic.
3. **Decisioning Service**: Implements real-time selection and ML prediction for offering the optimal reward value, with a fallback default.
4. **Reward Ledger/Wallet**: Tracks reward balances and points for each user. Integrates with the core product backends to disburse rewards: e.g. grant cash into wallet, credit shares to brokerage account, or issue voucher codes.
5. **User Data Layer**: Connects to Ajaib’s CRM/Data Lake to retrieve user profiles, transaction history, and ML model scores for targeting.

Integration approach: Each product team (stocks, crypto, payments, savings) will publish key events on Kafka (e.g. “trade_executed”, “payment_completed”, “account_opened”). The rewards engine consumes the events via the Kafka topics. For disbursement, the engine calls product-specific APIs or ledger functions (e.g. stock deposit, wallet credit, external voucher API).

Data Flow:

1. User action **triggers events** in the product system.
2. Integration layer **forwards events** to campaign service.
3. Campaign service checks **which campaigns apply**, whether the user qualifies and engages the decisioning service.
4. Rewards engine decisioning service **calculates/ selects reward** balancing relevance (fit user profile/goals) and revenue impact.
5. Risk engine performs **fraud and compliance checks**.
6. Approved **rewards are disbursed** through product-specific channels.
7. Analytics service captures all **events for performance measurement**.

Risk Prevention & Reward Disbursement

To prevent abuse and financial loss, the system will enforce risk controls at multiple levels:

1. **Eligibility Verification**: Strict checks (e.g. KYC completed, one user per identity, no duplicate accounts from same device or IP). Referral schemes require unique new user activation.
2. **Abuse Detection**: Flag suspicious activity (multiple sign-ups from same device, repeated cancellations after reward, etc.) and exclude those users.
3. **Reward Audit Trails**: Every reward disbursal is logged; anomalies trigger alerts.
4. **Cost Controls**: Soft and hard caps on total rewards issued ensure budget adherence.
5. **Staggered Payouts**: For high-value rewards, delayed/conditional release of the reward (e.g. bonus granted only after 7 days of sustained account activity).
6. **Compliance Checks**: Ensure rewards (especially cross-border crypto or securities) comply with regulations. Work with legal to define limits.

When disbursing rewards the engine will validate all campaign conditions server-side before issuing any funds. Rewards (cash, points, assets) are credited directly through Ajaib's secure wallets or brokerage accounts, avoiding manual processes. Integration with anti-fraud systems and ML monitoring (e.g. unusual reward redemption patterns) will further reduce risk.

Success Metrics & Goals

Key metrics to track implementation success will include:

1. **P0 Metrics -**
    a. **Payback Period**: Rewards Expenses in Period / (Net New MRR Acquired in Period * Gross Margin)
    b. **ROI**: (Incremental revenue from engaged users – cost of rewards) / cost of rewards.
    c. **Cross product adoption rate**: Target Y% of users transacting at least 2+ products.
    d. **User Acquisition Cost**: Target X% decrease.
    e. **Customer Lifetime Value:** Target Z% increase

    f. **MAU growth**

2. **Acquisition:**
    a. Number of new users acquired via referral campaigns
    b. Cost per acquisition (CPA) vs. target
    c. Conversion rate of new registrations to funded users.
3. **Activation:**
    a. % of users completing first trade or funding their account after signup.
    b. Conversion rate of funded users to transacting users.
4. **Cross-Sell:**
    a. Increase in multi-product usage (e.g. % of wallet users who open a trading account), measured by cohort.
5. **Transaction Growth:**
    a. Lift in monthly active transactions by product (stocks, crypto, etc.) attributable to rewards.
6. **Retention/Churn:**
    a. Improvement in 30/90-day retention rates (baseline vs. after rewards).
7. **Engagement:**
    a. Growth in frequency of usage (e.g. average trades/user/month).
8. **Fraud Rate:**
    a. Number/percentage of reward attempts flagged as invalid, to ensure abuse remains under threshold.

These metrics will be tracked per campaign and aggregated for the platform. Targets will be set (e.g. CPA below industry benchmarks, 3x payback within 6-12 months) and adjusted over time.

Team Collaboration & Ownership

Here are the roles and scope for the different stakeholder teams :

1. **Rewards Platform Team**: Central team responsible for building and operating the rewards infrastructure (campaign engine, interfaces, data). This team defines APIs/events and maintains the platform.
2. **Product and Growth Teams (Stocks/Crypto/Mutual Funds/Payments/Savings)**: Each product group owns their campaign strategies and content. They define use-case-specific rewards (e.g. “first bond purchase bonus”) and work with

marketing to create campaign briefs. They ensure their systems emit required events and can accept rewards.

3. **Marketing**: Collaborate with growth teams to design campaign creatives and targeting. Use CRM data to feed back into rewards segmentation.
4. **Data Science and Analytics Teams**: Develop ML models for audience scoring (propensity, LTV) and analyze campaign performance.
5. **Compliance & Risk**: Oversee reward rules (e.g. caps, terms), handle fraud reviews, and ensure regulatory compliance (esp. for rewards involving securities or crypto).
6. **Governance Committee**: Cross-functional group (leaders from product, finance, marketing, legal) to approve campaign policies, budgets, and resolve cross-team issues.

Implementation Timeline (Indicative)

1. **Month 0–1: Planning & Design**
    a. Finalize requirements and success metrics.
    b. Draft high-level architecture and data schemas.
    c. Assign team roles; set up collaboration processes.
2. **Month 2–3: Core Platform Development (MVP)**
    a. Build event ingestion and campaign engine backbone.
    b. Develop basic UI for campaign setup and targeting.
    c. Implement simple reward types (e.g. referral cashback, points accrual).
3. **Month 4–5: Pilot Integration & Testing**
    a. Integrate with one or two key product lines (e.g. payments/QRIS and stocks).
    b. Run internal pilot campaigns (for QA).
    c. Set up analytics dashboards for initial metrics.
4. **Month 6–7: Rollout and Optimization**
    a. Onboard remaining products (crypto, mutual funds, bonds, savings).
    b. Launch first public campaigns (e.g. referral program, first-trade bonus).
    c. Monitor performance, refine targeting models, adjust caps.
5. **Month 8–9: Expansion & Automation**
    a. Add advanced features: ML-based target segments, dynamic reward sizing.
    b. Implement campaign cloning, bulk-edit, and automated optimization.
6. **Month 10–12: Scaling & Evaluation**
    a. Full rollout of multi-product campaigns.
    b. Ongoing measurement of ROI, making policy adjustments.
